

Dereeling, the fast and easy way

Komax ads 115 and ads 117 – Gentle wire delivery at high speeds

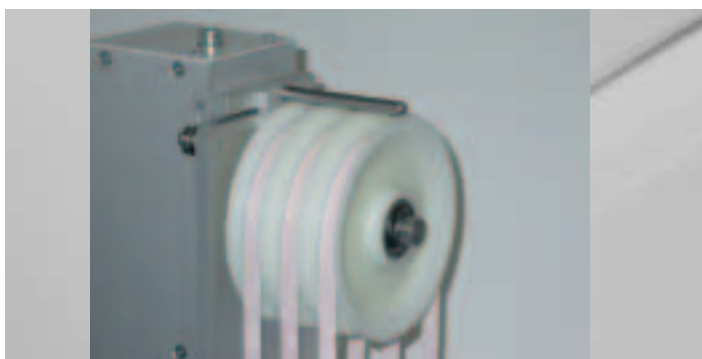

You are assured gentle, continuous and fast wire delivery no matter what version of the new Komax dereelers you select, from compact table-mounted models for lightweight reels to free-standing units for weights up to 50 kg!

Marc Huber *Product Manager*

Komax ads 115 – The tabletop model

The Komax ads 115 is a wire delivery system that can be used with the utmost flexibility in combination with Komax automatic cutting and stripping machines. The dereeling disk accommodates reels of up to 400mm in diameter, loose coils and flat cables. The quick-clamping system allows you to change the various reels in no time. The large linear storage unit continuously regulates the dereeling speed, ideally adapting it to the amount of wire required. Komax ads 115 displays these same qualities even in FFC (flat flexible cable) applications.

Round conductor on the Komax ads 117

Komax ads 117 – For reels weighing up to 50 kg

The ads 117 wire delivery system allows wire to be fed smoothly and steadily to all Komax automatic cutting and stripping machines. The storage arm regulates the dereeling speed continuously and adapts it ideally to the amount of wire needed. Threading the wire in and out of the machine is as easy as can be, thanks to the fold in storage arm and reverse direction of rotation. The system complies with high safety standards thanks to the reel cover and the return stop for wire end detection.
